

Infor Fashion PLM

Reduce time from concept to consumer

Specifically created for the fashion industry, Infor® Fashion PLM is a complete solution that helps reduce time from concept to consumer—from line planning, design, and development through to sourcing and production.

Key benefits

Infor Fashion PLM is a powerful product lifecycle management and collaboration platform that can help all of your value chain partners innovate more readily, respond more quickly, and act more decisively.

With Infor Fashion PLM, you can:

- Plan, design, develop, and source multiple collections.
- Multi-task with mass create and edit capabilities, drag and drop features, and contextual support for information panes.
- View real-time data from configurable grids, contextual info panes, critical path dashboards, and advanced reporting.
- Save multiple layouts for specific tasks, accessible via the web or on mobile apps.

Improve the efficiency of your operations

With an intuitive user interface, drag-and-drop functionality, and a customizable homepage, Infor Fashion PLM can quickly increase the uptake and productivity of all of your team members. In addition:

- Adobe® plug-ins allow designers to quickly create new styles and update those already existing. Pre-configured templates speed up the entire process.
- Advanced capabilities allow you to create new styles or connect existing designs to a line plan whenever you choose.
- You can mass create, update, delete, replace material and requests, so you can save substantial time developing and fine-tuning new styles.
- You generate purchase orders for samples from within Infor Fashion PLM, so you'll have more time to focus on creative, proactive tasks.
- Graphical dashboards and drill down capabilities allow users and managers to have a complete picture—from company level right down to calendars and styles.
- By consolidating information about materials and factories, Infor Fashion PLM vastly improves your control, documentation, and tracking of suppliers.

Streamline planning with reusable elements

Infor Fashion PLM can serve as the platform and hub for your product development team, so you can deliver better products to consumers faster, while shaving unnecessary costs.

Your users can customize their widgets, panels, and context-sensitive panes to streamline your overall planning process. These configured layouts can be saved and used again and again.

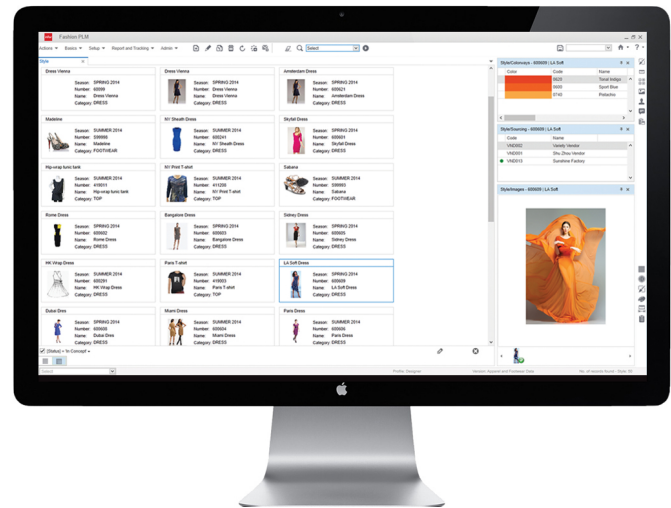

With Infor Fashion PLM, the processes for product, material, and trim development are built upon reusable elements, so you can:

- Create and manage various reusable, standardized data elements that can go into products as they are developed (other than materials and trims), including points of measure, grade rules, colors, color palettes, sizing tables, request types, costing elements and cost models, symbols (for care labels), seasons, and associated deliveries and suppliers.
- Set up database versions, security, general company settings, and individual user preferences with the admin menu.
- Install additional language files to operate the admin menu in languages other than English.
- Manage and design your company's standard reports or create new reports that can be configured to fit a certain process step.
- Create and edit critical path templates that can be applied to styles for product development tracking, and also track progress across all styles using each critical path.
- Print and export printouts from the panel grid, following your current grid layouts and filters. Files can be exported to Excel, CSV, and JPG, as well as other formats.
- Drag and drop images from external file folders on a network or locally on your computer. Multiple images can be dragged in at once; if they aren't already in the JPG format, images will be converted to JPGs.
- Crop images, make thumbnails, and create annotations on your images, then convert your images into a variety of other file formats.
- Define all your basic tables, including search lists (product categories, material type, and countries), plus currencies, exchange rates, unit of measure conversions, and VAT percentages. You can also define an optional product hierarchy with additional filtering capabilities.

Improve your performance with beautiful software

Infor Fashion PLM has the flexibility to suit your specific infrastructure. The solution can be deployed in the cloud, on-premise, or as a hybrid. No matter how you choose to deploy Infor Fashion PLM, our unique workflow methodology, together with a beautiful user interface and advanced user experience, is intuitive enough for your design team, powerful enough for your product development team, and accurate enough for your merchandisers.

With Infor Fashion PLM, you can reduce lead times, cut costs, and ensure quality, so your original design concepts are communicated clearly and executed accurately through every phase of development, production, and distribution to the end customer.
