

INFOR SUPPLY CHAIN

It's time to reimagine supply chains as commerce networks

In today's business world, how skillfully a company uses its supply chain matters more than ever. Technology has created greater disruption, competition, and customer expectations across every industry. Speed-to-market, service levels, delivery times, and customer service are now the very factors by which companies compete.

This means that today's supply chains need to do a lot more than they ever have. They need to move faster, be more flexible, coordinate across many more entities, and operate even more efficiently.

Coordinating complex supply chain activity across time zones, trading partners, and information systems is no easy task. And yet, the market requires it. This is where a commerce network can help.

If you're trying to forge a modern supply chain you need 3 fundamentals to underpin your operations:

Visibility into supply chain processes beyond your own enterprise.

The ability to collaborate seamlessly with your trading partners.

Data infrastructure to wield technologies like A.I. and IoT that make the entire supply chain smarter.

At its core, a commerce network connects every supply chain partner together, bringing visibility and collaboration across the entire supply chain process. Every organization can know what's happening, in real time, so they can respond faster to events and make better business decisions. Sharing data directly translates to removing latency, and with a commerce network, the effect spreads throughout the entire supply chain. Artificial intelligence and analytics, built to use network data, can help you optimize beyond your own enterprise, deliver value to all, and strengthen the entire supply chain holistically.

Supply chains are no longer simple, linear chains. By adopting commerce networks, companies can position themselves to be more agile, efficient, and ready for whatever the future brings.
